

CHANDRAKANTH

Azure Data Engineer (ADF, ADB, Python, SQL, PySpark, Apache Spark, Scala)

📞 7989632967

✉️ chandrakanthad111@gmail.com

CAREER OBJECTIVE

Highly qualified Azure Data Engineer with overall, 5 years' and relevant 3 years of experience in the industry. Enjoy creative problem solving and getting exposure on multiple projects and I would excel in the collaborative environment on which your company prides itself.

PROFESSIONAL SUMMARY

- Experience with Azure Cloud technologies such as Azure Data Factory, Azure SQL, Azure data lake storage Gen1 & Gen2, Azure Data Studio, Azure data explorer, Azure Synapse analytics, Azure Blob Storage Azure Data Bricks.
- Familiar with creating and managing notebooks, jobs, clusters, and libraries.
- Having good experience in SQL development using ORACLE 11g and 12c.
- Good understanding on SQL concepts like DML, DDL operations, functions, stored procedures, and Joins.
- Extensive experience in creating complex database objects like Stored Procedure, Function.
- Experience in creating Tables, Views, Constraints, Query optimization, little on DB tuning.
- Good experience in Azure Data components like Azure Data Factory (ADF), Azure Data Bricks (ADB), PySpark, Storage Accounts, Azure SQL Database, triggers and Azure Data Lake.
- Working with RDD'S, Data Frame's in PySpark frameworks.
- Good understanding of Spark Architecture, Transformations and Actions.
- Excellent knowledge of ADF building components – Integration Runtime, Linked Services, Data Sets, Pipelines, Activities.
- Designed and developed data ingestion pipelines from on-premises to different layers into the ADLS using Azure Data Factory (ADF V2).
- Orchestrated data integration pipelines in ADF using various Activities like Get Metadata, Lookup, For Each, Wait, Execute Pipeline, Set Variable, Filter, Until etc.
- Implemented dynamic schema mapping pipeline to extract the multiple files into multiple targets with the help of single pipeline from on-prem to cloud.
- Good exposure on Agile SDLC and participated in sprint ceremonies (Sprint planning, Sprint review, Sprint retrospective and Daily Scrum)

TECHNICAL SKILLS

Cloud Platforms	Azure Data Factory, Azure Synapse Analytics, Azure Databricks, (ADLS), SQL Database, Microsoft Fabric
Data Modelling	Star Schema, Snowflake Schema, Dimensional Modelling, Scala
Programming Languages	SQL, Python, PySpark, Scala
Data Warehousing	Azure Synapse Analytics, SQL Data Warehouse, Snowflake, Teradata

PROJECTS

Project #2

Client : UPS

Role : Azure Data Engineer

Environment : Azure Data Factory (ADF), Azure Data Lake Storage Gen2 (ADLS Gen2), Azure Synapse Analytics, Azure SQL Database, Azure Key Vault, Azure DevOps, Python, SQL, Scala,

Project Description: Operating in more than 200 countries and territories, we're committed to moving our world forward by delivering what matters. Beginning as a small messenger service, UPS was started by two enterprising teenagers and a \$100 loan. Now, we're almost 500,000 UPSers strong, with operations around the globe. As a transportation and logistics leader, we are proud to offer innovative solutions to our customers—both big and small. We also support the communities we serve. Just take a look at The UPS Foundation's social impact report! Headquartered in Atlanta, we can be found on the web at [ups.com](https://www.ups.com) and [about.ups.com](https://www.about.ups.com).

Roles and Responsibilities:

- Designed and developed scalable ETL/ELT data pipelines using Azure Data Factory (ADF) to ingest data from multiple source systems into Azure Data Lake Storage Gen2 (ADLS Gen2).
- Built and configured Linked Services, Datasets, Pipelines, and Activities in Azure Data Factory to orchestrate end-to-end data ingestion, transformation, and workflow automation.
- Implemented data transformation and cleansing logic using ADF Mapping Data Flows, Python, and SQL to process large volumes of healthcare data efficiently.
- Developed and optimized SQL queries, stored procedures, and database objects in Azure SQL Database and Azure Synapse Analytics to support data warehousing and analytics workloads.
- Designed data models and schemas in Azure SQL Database / Azure Synapse to enable efficient reporting, analytics, and business intelligence solutions.
- Implemented secure credential management using Azure Key Vault and integrated Azure DevOps for CI/CD pipeline deployment and version control of data engineering workflows.
- Monitored and optimized ADF pipeline executions, data workflows, and query performance, ensuring high data reliability, scalability, and performance across the Azure data platform.

Project #1

Client : 3M

Role : Azure Data Engineer

Environment: SQL, T-SQL, Azure SQL Database, Azure Data Factory (ADF), Azure Data Lake Gen2, Azure Synapse Analytics, Data Modeling, Microsoft Fabric (Lakehouse, Data Engineering, Warehouse, Pipelines, Notebooks), Performance Tuning, Stored Procedures, Views, Functions

Project Description: The 3M Company (originally the Minnesota Mining and Manufacturing Company) is an American multinational conglomerate operating in the fields of industry, worker safety, and consumer goods. Based in the Saint Paul suburb of Maplewood, the company produces over 60,000 products, including adhesives, abrasives, laminates, passive fire protection, personal protective equipment, window films, paint protection film, electrical, electronic connecting, insulating materials, car-care products, electronic circuits, and optical films. Among its best-known consumer brands are Scotch Tape, Scotchgard surface protectants, Post-it notes, and Nexcare adhesive bandages. 3M's stock ticker symbol is MMM and is listed on the New York Stock Exchange, Inc. (NYSE), and the SIX Swiss Exchange

Roles and Responsibilities:

- Analyzed business requirements and translated them into database design and SQL-based data solutions to support e-commerce analytics and reporting.
- Developed and optimized complex SQL queries, Stored Procedures, Views, and Functions to process and transform large volumes of transactional data.
- Designed and implemented database schemas, tables, indexes, and constraints in Azure SQL Database / SQL Server to support data warehousing and reporting workloads.
- Performed ETL (Extract, Transform, Load) operations using SQL queries and Azure Data Factory (ADF) to move data from source systems into Azure SQL Database.
- Implemented data cleansing, filtering, aggregation, and transformation logic using SQL to prepare structured datasets for analytics and Power BI reporting.
- Optimized SQL query performance using indexing, query tuning, and execution plan analysis to improve database efficiency and processing speed.
- Collaborated with .NET applications and reporting teams, enabling CRUD operations and Power BI integrations for secure and scalable data access and visualization
